SUMMARY

A Bachelor's graduate in Information Technology looking for an opportunity to learn and grow in the field of technology world.

Solid team player with outgoing, positive attitude, and proven skills in establishing trusting relationships with clients. I can work confidently in a diverse and inclusive environment.

I have skills and project experience in working with React and Redux as Font-End and Ruby on Rails as backend.

PROJECTS

Online Music Application

- **https://hiccupaashish.github.io/music-app/**
  • A online music application similar to Play Music.
  • User can choose between 8 music from the list which i have uploaded manually.
  • An application that i wanted to make for a very long time, so i built it in my free time.

Aashish news
March 2022 - March 2022

- **https://hiccupaashish.github.io/Javascript-API-project/**
  • An Indian news website where user can see all the stories going in the country based on the Categories like: Politics, Sports, Science and Top news.
  • It's a simple SPA (Single Page Application) Java-script Project. I used a news API and carried out all the functions and events through jQuery and Java-script. This page also has a like button, where users can like a certain news and add it to their favorites tab so they can view it later

React Quiz
September 2022 - November 2022

- **https://hiccupaashish.github.io/Aashish-React-Project/**
  • An online quiz application made from React and Firebase where user can play quiz and view their respective scores.
  • Users are also able to play as many times as they want and can also delete their data from the application. This application utilizes all the hooks of React and uses Firebase for storing users scores.

Cocinero

- **College Project**

June 2021 - September 2022

• A chef finding app like "Air Tasker" which helps people to find Chefs based on their location and hire them for private functions or events.

• It was a college group project where we built the Prototype and deployed within 3 months.

• We used .NET MAUI for the app development. We were able to use Firebase as a backend Server for authorization and storing data. To make the UI interactive and easy to use we used Google map API to find chefs which is like finding restaurants in google maps.

Store Central
June 2022 -July 2022

• **Personal Project**
• Build a web-application where users/retailers can keep track of their stores stocks with customer checkout functionality built in.
• A web-application with built in social media site where users can post anything about their stores and ask other retailers for help.

EDUCATION

Bachelors in Information Technology

• **Victorian Institute of Technology**
Level 5, 333 Kent street, Wynyard Sydney • 2021

CERTIFICATIONS

Bootcamp for Software Developer
